

To find the relationship between two individuals:

- 1) Start with a common ancestor.
- 2) Find the relationship of individual "A" to the common ancestor along the top of the chart.
- 3) Find the relationship of individual "B" to the common ancestor along the left side of the chart.
- 4) Follow both lines to the intersection to find their relationship.

For example: If "A" is the 4x Great Grand Child of the common ancestor and "B" is the 2x Great Grand Child, then the relationship is Third Cousin 2x Removed.
